ICONOVA'NIN MİMARİ VE MÜHENDİSLİK GÜCÜ

Yaşam Alanlarınız Sağlam Temeller Üzerinde

ICONOVA projesinde yüksek binalar için maksimum deprem güvenliği sağlayan ve en güvenli temel sistemi olarak nitelendirilen radye temel sistemi uygulanmıştır.

Dünyanın en ünlü gökdelenlerinde kullanılan özel üretim, yüksek dayanımlı C40-C50 beton, radye temel ve fore kazık sistemi ile oluşturulan ICONOVA'da, yüksek yaşam kalitesi size sağlam temeller üzerinde sunulmaktadır.

ICONOVA'S ARCHITECTURAL AND ENGINEERING POWER

Your Living Spaces on Solid Foundations

In the ICONOVA project, the raft foundation system providing maximum earthquake safety and characterised as the safest foundation system is applied for high-rise buildings.

High quality of life is offered to you on solid foundations in ICONOVA built with special production, high-strength C40-C50 concrete, raft foundation and forecasting system used in the world's most famous skyscrapers.

En Güvenli Temel Sistemi

Radye temel, yükün zemine düzgün bir şekilde dağılmasını sağlar. Deprem anında yapıyla birlikte hareket ederek hasar oluşumunu büyük ölçüde engeller. ICONOVA'da yüksek katlı blokların altına kalınlığı 2,00m ile 2,50m arasında değişen radye temel uygulanmıştır.

Bununla birlikte farklı zemin oturumalarını engellemek, deprem güvenliği sağlamak ve yükleri zemine güvenle aktarmak amacı ile projede çapları 80cm ve 100 cm, arasında değişen, toplamda 20 km alanda, 1208 adet fore kazık inşa edilmiştir. Olası bir depremde, fore kazıklar binanın düşey konumda kalmasına yardımcı olur. Zemine tutunma oranı arttığı için binanın deprem anında savrulması azalır.

The Most Secure Foundation System

Radio foundation ensures the load to be distributed evenly on the ground. In the event of an earthquake, it moves with the structure and prevents damage to a great extent. In ICONOVA, a radio foundation with a thickness ranging from 2.00m to 2.50m is applied under the high-rise blocks.

Besides, in order to prevent different ground settlements, to provide earthquake safety and to transfer the loads safely to the ground, 1208 bored piles with diameters ranging between 80 cm and 100 cm have been constructed in a total area of 20 km in the project. In a possible earthquake, bored piles help the building to remain in a vertical position. Since the rate of adhesion to the ground increases, the skidding of the building during an earthquake is reduced.

C40-C50 BETON SINIFI İLE MAKSİMUM SAĞLAM!

ICONOVA projesinde taşıyıcı sistem imalatlarında, temel ve otoparklarda C40 sınıfı, yüksek katlı bloklarda ise C50 sınıfı yüksek dayanımlı beton kullanılmıştır. ICONOVA için seçilen beton sınıflarının kalitesi, deprem ve dayanım açısından en yüksek performansı sağlamaktadır.

C40-C50 sınıfı beton özellikle; yüksek katlı binalarda ve yüksek mukavemet gerektiren yapıların temelleri ile agresif çevre koşullarına sahip köprü, stadyum, enerji santralleri, viyadük, tünel vb. inşaatları, nükleer radyasyon ortamında bulunan yapılar ve suyun aşındırıcı etkisi altında bulunan liman, baraj vb. yapılarda kullanılmaktadır.

Yüksek mukavemet gücü, yüksek dayanıklılık (durabilite), hava koşullarına, korozyona, kimyasallara, çevresel faktörlere ve sülfat, klorür, yağ gibi etkenlere karşı düşük geçirgenlik, homojenliğini koruma özelliği sayesinde iyi işlenebilirlik, yüksek basınç karşı dayanımı, daha yüksek durabilitesi, daha düşük boşluk oranı ve daha düşük geçirgenlik özellikleri sayesinde uzun ömürlü oluşu bu beton sınıfının en önemli avantajlarıdır.

MAXIMUM STRENGTH WITH C40-C50 CONCRETE CLASS

In ICONOVA project, C40 class high-strength concrete is used in foundations and car parks and C50 class high-strength concrete is used in high-rise blocks. The quality of the concrete classes selected for ICONOVA provides the highest performance in terms of earthquake and strength.

C40-C50 class concrete is especially used in high-rise buildings and foundations of structures requiring high strength and in the construction of bridges, stadiums, power plants, viaducts, tunnels, etc. with aggressive environmental conditions, structures in nuclear radiation environment and structures such as harbours, dams, etc. under the corrosive effect of water.

The most important advantages of this class of concrete are high strength, high durability, low permeability against weather conditions, corrosion, chemicals, environmental factors and factors such as sulphate, chloride, oil, good workability thanks to its ability to maintain its homogeneity, resistance to high pressure, higher durability, lower void ratio and long life thanks to its lower permeability properties.

YANGIN GÜVENLİĞİ

ICONOVA, NFPA "National Fire Protection Association" yönetmeliklerine uygun olarak tasarlanmıştır. ICONOVA'da yüksek güvenlikli yangın algılama, kontrol ve söndürme sistemleri ile birlikte, katlar arası yangın sıçramasını önleyecek yangın bariyerleri mevcuttur. Ayrıca olası bir yangında dumandan zehirlenmeleri engellemek üzere asansör ve merdivenlerde aktif hale gelecek ve temiz hava sirkülasyonu sağlayacak basınçlandırma sistemi bulunmaktadır.

FIRE SAFETY

ICONOVA is designed in accordance with NFPA "National Fire Protection Association" regulations. ICONOVA has high-security fire detection, control and extinguishing systems as well as fire barriers to prevent fire spread between floors. In addition, there is a pressurisation system that will be activated in the lifts and stairs to prevent smoke poisoning in a possible fire and will provide fresh air circulation.

RWDI RÜZGÂR TÜNELİ TESTİ

ICONOVA'nın 7 kulesi de farklı doğa koşullarındaki yapısal güvenlik unsurlarını üst düzeyde tutmak üzere tasarlanmıştır. Dünyanın rüzgâr mühendisliği konusunda önde gelen firmalarından Kanada menşeli RWDI firmasına yaptırılan rüzgar tüneli testlerinde, uluslararası yüksek yapı standartlarına uygun olarak tüm rüzgar etkileri en ince detayına kadar hesaplanmıştır.

RWDI WIND TUNNEL TEST

The seven towers of ICONOVA are designed to maximise structural safety in different natural conditions. In the wind tunnel tests conducted by Canadian RWDI, one of the world's leading companies in wind engineering, all wind effects are calculated down to the finest detail in accordance with international high construction standards.

DEPREME DAYANIKLI

ICONOVA Projesi, tasarım sürecinde yürürlükte olan “Deprem Bölgelerinde Yapılacak Binalar Hakkında Yönetmelik 2007 (DBYBHY 2007)”, “TS 498 Yapı Elemanların Boyutlandırılmasında Alınacak Yüklerin Hesap Değerleri”, “TS 500 Betonarme Yapıların Tasarım ve Yapım Kuralları”na uygun olarak projelendirilmiş ve daha sonra yürürlüğe giren **2018 deprem yönetmeliğinin de üzerinde performans sağlayacak biçimde** inşa edilmiştir.

ICONOVA’da yüksek binaların tasarımı konusunda “Türkiye Bina Deprem Yönetmeliği 2018 (TBDY 2018)”e de altlık teşkil eden “İstanbul Yüksek Binalar Deprem Yönetmeliği (Taslak; 2008)” ve Amerikan yönetmelikleri olan “ACI 318-11 Building Code Requirements for Structural Concrete and Commentary” ve “ASCE 7-05 Minimum Design Loads for Buildings and Other Structures” kuralları da gözetilmiştir.

EARTHQUAKE RESISTANT

ICONOVA Project is projected in accordance with the “Regulation on Buildings to be Built in Earthquake Zones 2007 (DBYBHY 2007)”, “TS 498 Calculation Values of Loads to be Taken in Dimensioning of Structural Elements”, “TS 500 Design and Construction Rules of Reinforced Concrete Structures” in force during the design process and is constructed to provide performance above the **2018 earthquake regulation that came into force later.**

On the design of high-rise buildings in ICONOVA, it is also taken into consideration the “Istanbul High Rise Buildings Earthquake Regulation (Draft; 2008)”, which also constitutes the basis for the “Turkey Building Earthquake Regulation 2018 (TBDY 2018)”, and the American regulations “ACI 318-11 Building Code Requirements for Structural Concrete and Commentary” and “ASCE 7-05 Minimum Design Loads for Buildings and Other Structures”.

1. SINIF MALZEME SEÇİMİ

Cephe Sistemi; ICONOVA'da Kleidco tarafından projeye özel olarak tasarlanan ve EN (Europeane Norm) standartlarına göre akredite test edilen USG 80 panel cephe sistemi uygulanmıştır. USG 80 hava geçirimsizlik, su sızdırmazlık, rüzgar yükü dayanımı ve termal ısı yalıtımı özellikleriyle ICONOVA'ya artı değer sağlamaktadır.

Cam; ICONOVA dış cephesinde Guardian Glass tarafından geliştirilen SunGuard® SNX 60/28 cam malzeme kullanılmıştır. Bu camın genel özellikleri; yüksek enerji kontrolü sunması, %60 ışık geçirgenliği ile gün ışığından birebir faydalanma imkanı tanınması, %28 enerji geçirgenliği ile güneş ısını en üst düzeyde kullanabilme ve böylelikle sürdürülebilir, düşük enerjili ısıtma, soğutma avantajı sağlamasıdır. ICONOVA'da çift yalıtım özelliği ile kullanılan bu cam, akustik açıdan da yüksek seviyede ses geçirgenliğini engellemektedir.

Kompozit; ICONOVA'nın dış cephesinde kullanılan Mineral Dolgulu A2 Yanmazlık Sınıfı Alüminyum Kompozit Panel, yangın riskine karşı üstün performans sağlayan çok özel bir malzemedir. Genellikle çok katlı yapılar, gökdelenler, AVM'ler, stadyumlar, havaalanları, hastaneler, metro ve tren istasyonları, oteller, kamu binaları gibi insan sirkülasyonunun yoğun olduğu ve yangın yalıtımının önem arz ettiği tüm yapılarda tercih edilen bu kompozit türünün önemli avantajları; yanmaz statüsü ile yangına karşı üstün performans sağlaması, yangın anında yalıtım özelliği taşıması ve böylelikle yangının diğer dairelere sıçramasını engellemesi, yangın sırasında zehirli ve zararlı gaz çıkışına sebep olmayışı, çevre dostu bir yapı malzemesi olup; geri dönüştürülebilmesi ve zorlu hava koşullarında bile maksimum dayanıklılığa sahip olmasıdır.

1ST CLASS MATERIAL SELECTION

Facade System; In ICONOVA is applied the USG 80 panel facade system, specially designed by Kleidco for the project and accredited tested according to EN (EuropeaneNorm) standards. USG 80 provides added value to ICONOVA with its air impermeability, water impermeability, wind load resistance and thermal heat insulation features.

Glass; SunGuard® SNX 60/28 glass material developed by Guardian Glass is used on the facade of ICONOVA. The general features of this glass are to offer high energy control, to provide the opportunity to make full use of daylight with 60% light transmittance, to maximise the use of solar heat with 28% energy transmittance and thus to provide sustainable, low-energy heating and cooling advantages. Used with double insulation feature in ICONOVA, this glass prevents high level sound permeability in acoustic terms.

Composite; Mineral Filled A2 Fireproof Class Aluminium Composite Panel used on the exterior of ICONOVA is a very special material that provides superior performance against fire risk. The important advantages of this composite type, generally preferred in all buildings where human circulation is intense and fire insulation is important, such as multi-storey buildings, skyscrapers, shopping malls, stadiums, airports, hospitals, subway and railway stations, hotels, public buildings are to provide superior performance against fire with its non-flammable status, to have insulation feature in case of fire and thus prevent the fire from spreading to other flats, not to cause toxic and harmful gas output during fire, to be an environmentally friendly building material; to be recyclable and to have maximum durability even under harsh weather conditions.
